2-way, 1-way, and 1-time binding

```
Your name:
<input type="text"
       ng-model="name" >

<div>Echo: {{ lastName }} </div>

<div>Echo: {{ ::fullName }} </div>
```

2-way binding

1-way binding

1-time binding

Summary

- 2-way binding (ng-model) means:
  - Listener for change on input automatically set up by Angular updates prop value on $scope
  - Direct update to prop value is automatically updated in UI
- 1-way binding ({{ prop }}) means:
  - Direct update to prop value is automatically updated in UI
- 1-time binding ({{ :: prop }}) means:
  - Initialized value of prop is automatically updated in UI
  - Watcher for prop is removed, so UI never again gets updated
